DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fukushima et al. JP 05343674, in view of Hsu 5,538,909.

Fukushima et al. discloses a method of forming an LDD transistor including forming a gate dielectric (8) and gate electrode (10) on a planar substrate (2), etching a sloping sidewalls in the substrate using the gate structure as a mask, doping the source and drain regions at a first angle, and doping the LDD regions at a second angle, wherein the first angle is greater than the second angle (see figs 6 and abstract).

Fukushima et al. does teach doping through sidewall spacers to form the LDD regions.

Hsu teaches doping LDD regions (38) by doping through sidewall spacers using an angled implantation (see fig. 3E and related text).

Therefore, it would have been obvious to one of ordinary skill in the art to modify Fukushima et al. as taught by Hsu, because it would allow for better control of the channel width.
